

## **Work Distribution**

Three tasks need to be assigned:

1. Data collection: (SAUGATH REDDY GOPIREDDY)
  - a. This involves gathering information from large csv files using a csv reader and bringing them into java into a data structure that we can read from
2. Sorting and Organizing: (Luther Akinbodun)
  - a. This is taking the data and putting it into a priority queue and organizing the queues to be displayed
3. Display: (Mack Petro)
  - a. This is taking the sorted and organized data and making it into a visually pleasing output that is easily readable and can be used for our presentation

All three of us will work on the presentation together.
